

# Password Genie Windows Quick Start Guide

You've installed Password Genie Desktop so now what?

You'll see the Password Genie Main Menu after installation. From here you will see Logins, Wallet, Bookmarks Formfill Settings and Support. You can also see statuses of strength of passwords, Expired Credit Cards and Birthday Reminders.

First thing you'll want to do with Password Genie is to create Logins The Quickest way to create a login is to choose the Logins tab (see above) and follow these easy steps below in creating your first login.

## Logins:

Once in the Logins tab you will be greeted by the landing page for Logins. This page provides the steps on what is next. We want to create a New Login, once New is selected you have the choice of creating a Login Entry or a New Folder. Let's choose Login Entry to continue our quest in creating a Saved Login.

Once Login Entry is selected you will be automatically taken to the New Login -> Create Entry screen. Here you will see the necessary fields to complete a Login.

The screenshot shows the 'New Entry' screen in the Password Genie application. The interface includes a sidebar with 'Logins' selected, a main form area with the following fields: 'Login Name', 'URL', 'Username', 'Password', and 'Notes'. Below these fields is a 'Choose Folder' dropdown menu set to 'No Folder'. There are three toggle switches: 'Display in Browser' (checked), 'Auto-Submit' (unchecked), and 'Unmask Password' (checked). At the bottom right, there are 'Cancel' and 'Save' buttons.

- Saved Login Description (give you Login a name for easy recognition)
- Website URL (web page address goes here. EXAMPLE: <https://mail.google.com>)
- Username/Email ([johnH123@gmail.com](mailto:johnH123@gmail.com))
- Password (Includes Password Strength Rater. Password Genie will report if your Password is safe enough.)
- Notes (Enter anything you wish here)
- Folder Options (for simple organization)
- Generate Password (That's right Password Genie can create Passwords for you!!)

Once your desired fields are filled out, Press Save button to complete the login entry. After the login has been saved the information will be stored in your Login tab of the Main Menu.

The screenshot shows the 'Saved Logins' screen. A table lists saved logins with columns for 'Folder/Login Name' and 'URL'. One entry is visible: 'email' with URL 'mail.google.com'. A red circle highlights the 'View/Edit' button next to this entry. Below the table are buttons for 'Login Settings', 'Delete Folder', 'New Entry', and 'New Folder'.

The screenshot shows the 'View/Edit' screen for the 'email' login. It displays the following details: 'Login Name: email', 'URL: mail.google.com', 'Username: pgregski6715@gmail.com', 'Password: [masked]', 'Notes: pgregski6715@gmail.com'. There are also toggle switches for 'Auto-Submit', 'Unmask Password', and 'Display in Browser', and buttons for 'Advanced View', 'Delete', and 'Save'.

Here you can View/Edit your entry at any time.

How to have Password Genie log you into your saved Login Entry? Very Simple.... press on the URL (of the desired login) in the Logins section and webpage will open the machines default Broder and will do the rest.

Easy, right? Password Genie can do a lot more. Visit our How To Guides to learn about all the features of Password Genie including Bookmarks, Formfill, Birthday reminders...ect. As always, all SecurityCoverage apps are supported 24/7/365, so if you ever have any questions don't hesitate to ask.
